

AATISH MEHTA

Full Stack Mobile Developer | Flutter, Kotlin & SwiftUI | Python (FastAPI) Backend

Ahmedabad, Gujarat, India • +91 7383667590 • aatishm449@gmail.com • linkedin.com/in/aatishmehta17 • Open to Remote | Worldwide

5+ Years Experience • 10+ Apps Shipped • 10M+ Downloads • Independent Full-Cycle Delivery • Open to Remote Worldwide

PROFESSIONAL SUMMARY

Full-stack mobile developer with 5+ years of experience architecting and shipping production applications across Flutter, native Kotlin (Android), and Swift/SwiftUI (iOS), spanning AgriTech, Healthcare, On-Demand Delivery, VoIP, EdTech, and Social Networking domains—including a platform contributing to 10M+ downloads. Now expanding into backend engineering with Python, FastAPI, and MongoDB, building personal projects and applying that knowledge to production-style API design, alongside hands-on CI/CD (GitHub, GitLab), Docker (in progress), and AI workflow automation with n8n. Regularly owns client communication, requirements gathering, and independent project planning end-to-end without a dedicated PM layer—from architecture through offline-first design, real-time systems (WebSockets, Socket.IO, and VoIP), and AI/ML feature integration. Comfortable making independent technical decisions and collaborating with distributed, international teams in async-first remote environments. Actively targeting full-stack developer roles, with a growth path toward DevOps and AI engineering.

TECHNICAL SKILLS

Languages: Dart, Kotlin, SwiftUI, Python

Mobile: Flutter (Android/iOS/Web), Embedded Flutter, SwiftUI, Native Android, BLoC/Cubit, GetX, Provider, Riverpod, Clean Architecture, MVVM

Backend: Python, FastAPI, Node.js, REST APIs, GraphQL, WebSockets, Socket.io

Databases: MongoDB, Firebase/Firestore, SQLite, Hive, Shared Preferences

Cloud & DevOps: Git, GitHub, GitLab, CI/CD Pipelines, Docker (in progress), Firebase (Auth, FCM, Crashlytics, Remote Config), Play Console, App Store Connect, Postman

AI/ML & Integrations: On-device image classification, Plantix API (crop disease detection), n8n (AI workflow automation), AI API integration, Twilio (VoIP/Video), Mapbox, Google Maps SDK, AccuWeather API

Payment Gateways: Stripe, Razorpay

Delivery & Leadership: Client Communication, Requirements Gathering, Independent Project Planning & Delivery, Junior Dev Mentorship, Agile/Scrum, Sprint Planning, Code Review

Practices: Offline-first Architecture, Performance Optimization, RBAC & Multi-role Systems, Clean Architecture Documentation

PROFESSIONAL EXPERIENCE

Mobile App Developer (Full Stack Contributor) Dec 2023 – Present

Rushkar Technology Pvt Ltd • Ahmedabad, Gujarat, India • International clients, remote-ready delivery

- Owned the full mobile product lifecycle across multiple client apps — architecture, development, QA coordination, and live store deployment — as sole technical lead on several projects.
- Served as primary technical point of contact for international clients, running requirement and sprint sessions across time zones.
- Made independent architecture and technology decisions (state management patterns, API integration strategy, platform channel design), balancing delivery speed with long-term code health.
- Mentored a junior Flutter developer through onboarding and code review cycles, improving team delivery velocity.
- Managed end-to-end App Store and Play Store release processes—provisioning, signing, metadata, compliance, and staged rollouts.
- Integrated AI image processing, Mapbox SDK, AccuWeather API, VoIP SDKs, and Firebase across production apps; evaluated third-party tools for cost, reliability, and integration effort.
- Built personal backend projects with Python, FastAPI, and MongoDB and applied that knowledge on a live project to strengthen production-style API design—building toward full-stack ownership.

Android Developer Jun 2021 – Aug 2023

Hiyaa Infotech • Ahmedabad, Gujarat, India

- Developed and maintained native Android applications (Kotlin/Java) across multiple client projects, handling UI implementation, API integration, and release builds.
- Built and shipped app features end-to-end, from requirement understanding through Play Store deployment and post-release bug fixes.
- Worked with REST APIs, SQLite, and Firebase (Auth, FCM) to deliver data-driven, production-ready Android applications.
- Gained early hands-on exposure to Flutter for basic cross-platform UI modules, laying the foundation for the transition into full-time Flutter development.
- Participated in Agile sprint planning, daily stand-ups, and code reviews while collaborating with backend and QA teams to deliver mobile application features.

KEY PROJECTS

Smart Fasal — AgriTech Platform in Active Development

Stack: Flutter, Dart, BLoC, Firebase, REST APIs, Plantix API, AccuWeather API, TTS, AI Image Processing

- Built an end-to-end crop lifecycle guidance platform for Farmer, Retailer, and Distributor roles with role-based access modules.
- Implemented AI-powered crop disease detection using on-device image classification and Plantix API integration, delivering instant diagnosis and treatment suggestions with minimal connectivity.
- Integrated AccuWeather API for hyper-local weather data and engineered multilingual TTS support for low-literacy rural users.
- Designed the offline-first SQLite architecture and Firebase data layer for reliability in low-connectivity rural environments.

Mrsool—On-Demand Delivery Super-AppLive: Play Store & App Store | 10M+ Downloads | Saudi Arabia, Bahrain, Egypt

Stack: Flutter, Dart, Embedded Flutter, GraphQL, REST APIs, Google Maps, Firebase

- Contributed Flutter modules within a hybrid/native architecture using Embedded Flutter, supporting a gradual migration from native Android/iOS without disrupting millions of active daily users.
- Worked with GraphQL APIs for efficient data handling and optimized network communication in high-traffic production flows.
- Contributed to map-based delivery workflows, including live tracking and location-based features via Google Maps SDK.

Show United—Artist & Professional Networking Platform Live: Play Store & App Store

Stack: Flutter, Dart, GetX, Mapbox SDK, Firebase FCM, Twilio, Socket.io, REST APIs

- Led end-to-end solo delivery of a dual-sided marketplace connecting artists/performers with event organizers, from requirements through release.
- Integrated Mapbox SDK for proximity-based talent discovery with custom pin clustering for dense urban areas.
- Implemented real-time chat (Firebase/Twilio/Socket.io), subscription-based feature gating, social OAuth authentication, and deep linking.

VoIP & Healthcare Communication (VoIP App / OrthoVoIP) Live: Play Store & App Store

Stack: Flutter, Dart, Twilio, VoIP SDKs, Platform Channels, SQLite

- Architected real-time calling with full foreground/background state management, integrating native iOS (CallKit) and Android (ConnectionService) via platform channels.
- Integrated Twilio for HIPAA-aligned VoIP/video calling in a healthcare communication platform, with SQLite offline storage for critical patient data.
- Implemented persistent background services and FCM-triggered native call UI, ensuring zero missed calls even when the app was fully terminated.

MagikSchool — School Management System (EdTech) Deployed

Stack: Flutter, Dart, REST APIs, Provider, SQLite, FCM

- Architected a fully API-driven dynamic module system, letting admins configure and toggle features without app updates.
- Implemented offline-first SQLite persistence and role-based access control across student, teacher, and administrator dashboards.

Additional Notable Projects

- ECMIS — Pharmaceutical CRM with multi-role access control, offline data sync, and field sales management workflows.
- JRT Mechanical Inventory — Enterprise ERP/inventory app with QR code scanning and reporting dashboards.

EDUCATION

Bachelor of Computer Applications: 2019 – 2023, Gujarat, India

ADDITIONAL HIGHLIGHTS

- Actively building full-stack capability with Python, FastAPI, and MongoDB through personal projects, applied toward production-style backend and API design.
 - Hands-on native Android (Kotlin/Java) and iOS (Swift/SwiftUI) experience, enabling direct collaboration with backend, DevOps, and AI engineering teams.
 - Comfortable owning ambiguous, cross-functional problems independently across full project lifecycles, without a dedicated PM layer.
 - Experienced in async, cross-timezone collaboration with international clients and distributed teams.
 - Open to fully remote, worldwide opportunities as a full-stack developer, with a growth path toward DevOps and AI engineering roles.
